Tool: Brown Video Sequencer Brown Multi-Lever Keyers

Designer: George Brown

http://www.audiovisualizers.com/toolshak/vidsynth/g_brown/g_brown.htm

“George Brown created a quantizing colorizer (divides one image into 8 shades of gray and lets you mix the colors in each of those shades. He also made a multi-level keyer where you could key up to 4 images on top of each other. I think only one or two of each of those machines were ever built.”
